

DEBug is used to kill and control sucking, chewing and crawling insects.

It is a mechanical insect control - upon contact, the fine powder absorbs lipids from the waxy outer layer of the exoskeleton and causes the insect to die from dehydration. Great for slugs, snails, aphids, caterpillars, earwigs, beetles, fruit flies, borers, thrips and more....

Our all natural Diatomaceous Earth is:

- Food Grade
- Non toxic
- Chemical Free
- Non-Staining
- Odorless
- Environmentally Friendly

DEBug is also BioGro certified as a Soil & Plant Nutrition (Fertiliser) and Crop Management (Insecticide).

Application

DEBug can be applied wet or dry to your garden plants.

Available in convenient 200g and 400g bottle with puffer tops for easy dry application. Ensure coverage over the entire plant (especially under the leaves) or around it's base. DEBug can also be diluted in water and applied as a spray. It is also sold in a 500g refill bag and larger sizes as required up to bulk 25kg bags. Please refer to application rates below.

Suggested dosage rates for plants and crops

5 litre 'pump up' type sprayer	20gms or 60mls
15 litre Backpack sprayer	60gms or 180mls
